Wireless Facial Recognition
Facial Recognition Terminal

**Large-capacity backup
battery, More portable**

The trend of Visible Light Facial Recognition technology has brought the user experience of biometric technology to a new height. As one of the biometric industry leaders, ZKTeco launched the second generation of facial recognition terminals – Horus E1.

Horus E1 is a portable mobile Time & Attendance terminal that can stand by for more than 8 hours with a full battery (turn off Wi-Fi, 3G, 4G, Bluetooth), full charge in 5-6 hours. It is one of the most advanced Time & Attendance terminals with incredibly compact size and powerful facial recognition technology in the market. This terminal offers up to 3-meter recognition distance, 30-degree pose angle tolerance, a maximum of 10,000 facial templates capacity, high anti-spoof ability, supports plentiful communication protocols (Wi-Fi, 3G, 4G, Bluetooth) and worldwide network settings, support positioning function, can be used to upload attendance location information to the system, and platform of ZKBioSecurity and BioTime.

Features

- A new height of facial recognition template capacity - up to 10,000 facial templates for 1:N recognition.
- Anti-spoofing algorithm against print attack (laser, color, and B/W photos), videos attack, and 3D mask attack.
- Multiple communication protocols are available: 4G, Wi-Fi, Bluetooth, and USB.
- 5-inch smartphone grade IPS touch LCD.
- 2MP CMOS with WDR.
- Various further development options: microphone and PIR sensor.
- Positioning attendance records only support sending to platform of Biotime
